Summary

Results-driven Full Stack Web Developer with a passion for building robust, scalable, and user-centric web applications. Demonstrates strong proficiency in data structures and algorithms, a quick-learning mindset for emerging technologies, and proven ability to deliver high-quality digital solutions in collaborative, cross-functional environments.

Experience

Full Stack Web Development Intern

May 2026 – Present

Main Flow Services and Technologies Pvt. Ltd.

Noida, UP (Remote)

- Developing an **AI-powered Customer Support Chatbot** using Next.js, MongoDB, and Generative AI API for automated real-time query resolution.
- Optimizing application performance and ensuring code quality through structured debugging, version control using Git, and peer collaboration.

AI/ML Intern

June 2025 – July 2025

Edunet Foundation

Remote

- Developed an **Employee Salary Prediction model** using Python and Machine Learning with supervised learning algorithms including Logistic Regression, Decision Tree, and Random Forest.
- Cleaned, processed, and encoded real-world demographic data for effective machine learning modeling.
- Deployed an interactive Streamlit web application for real-time salary prediction with live user inputs.

PROJECTS

StudyAim AI : AI Exam Notes Generator | *MongoDB, Express.js, React.js, Node.js, Generative AI API* [Live](#)

- Built a Full Stack AI SaaS web application using the MERN stack that generates structured exam notes from any topic.
- Integrated Generative AI API to generate exam-focused notes and summaries, with secure user authentication and session management.
- Used MongoDB to store and retrieve user-generated notes for persistent, scalable content management.
- Deployed the production-ready SaaS application on Render with a live environment accessible to real users.

Imagify AI : AI Image Generator | *MongoDB, Express.js, React.js, Node.js, AI Image API*

[Live](#)

- Built a Full Stack AI SaaS image generation web application using the MERN stack that converts text prompts into high-quality AI-generated images.
- Implemented secure user authentication with a credit-based system for controlled API usage per user.
- Used MongoDB to store user data, image history, and credit transactions.
- Deployed the production-ready AI SaaS application on Render with a live environment accessible to real users.

Employee Salary Prediction Model | Python, Scikit-learn, Machine Learning

[Live](#)

- Built an **Employee Salary Prediction** system using Python and Machine Learning; applied Logistic Regression, Decision Tree, and Random Forest with cross-validation to classify employee income.
- Deployed an interactive Streamlit web application enabling real-time salary prediction with dynamic user inputs.

Technical Skills

Languages: C, C++, Python, JavaScript

Frontend Tools: React.js, Next.js, Redux, JavaScript, CSS, HTML

Backend Tools: Node.js, Express.js

Databases: MongoDB, MySQL

Version Control and Collaboration: Git and GitHub

EDUCATION

RAJASTHAN TECHINICAL UNIVERSITY, KOTA

2023 – 2027

B.Tech - Computer Science and Engineering

Kota, Rajasthan

CGPA - 7.85

Certifications

- Web Development** – IBM SkillsBuild
- Artificial Intelligence Fundamentals** – IBM SkillsBuild
- Python & Machine Learning** – Think Wave Technologies Pvt Ltd
- Cyber Security** – IIRS, ISRO
